ApnoMart Sales & Profit Dashboard — Business Insights

Prepared by: Maha Lakshmi
Project: ApnoAI Data Analytics Internship
Tool Used: Google Looker Studio (Data Studio)
Dataset: ApnoMart Sales Data

1. Business Insights

Insight 1: Sales by Category

Furniture has the highest sales at approximately 3.52 million, while Electronics has the lowest sales at approximately 2.96 million among the five categories. ApnoMart should investigate customer demand and product performance in the Electronics category to identify opportunities for improvement.

Insight 2: Profit by Region

The Central region generates the highest profit at approximately 943.7K, while the North region generates the lowest profit at approximately 795.1K. Comparing product mix, pricing, and operating costs across these regions may help identify ways to improve regional profitability.

Insight 3: Monthly Sales Trend

Sales peaked in July 2026 at approximately 2.96 million. October sales are approximately 2.47 million, but the dataset only covers part of October. Therefore, October should not be directly compared with complete months without accounting for the partial reporting period.

2. Strategic Recommendation

ApnoMart should investigate the factors behind the strong sales performance of Furniture and the high profitability of the Central region. The business should review Electronics product demand and the North region's performance, then test targeted promotions or operational improvements where appropriate. Monthly sales should be monitored using complete reporting periods to support reliable decisions.

3. Conclusion

The dashboard provides an overview of sales, profit, order volume, profit margin, category performance, regional profitability, and sales trends. These insights can support data-driven decisions about product performance, regional operations, and future sales planning.
